An Introduction to Green Criminology and Environmental Justice

"Green Criminology embraces a wide and rapidly growing network of researchers and scholars around the world who are actively engaged in the study of environmental crime and ecological justice. Transgressions against humans, eco-systems, and animals constitute the main focus of Green Criminology and this new four-volume collection from Routledge provides an authoritative, one-stop reference work to make sense of the wide range of approaches, theories, and concepts that have informed its development and growth. Themes covered in the collection include: the conceptual foundations of Green Criminology; victimization and offending; criminal-justice responses to environmental crime; and emerging environmental issues, such as climate change, that demand urgent criminological attention. Topics range from transnational environmental crimes, such as the illegal dumping of waste and illegal trade in wildlife, through to prosecution and sentencing in relation to environmental crimes. Each volume provides a provocative and stimulating showcase of criminological research, scholarship, and commentary dealing with the nature and dynamics of environmental crime. The volumes are structured to provide users with a strong sense of the theories, methodological approaches, conceptual innovations, and empirical research of Green Criminology. Together, they constitute an essential work of reference for anyone interested in social and environmental transformations and justice from a criminological perspective"--

Forging a Socio-Legal Approach to Environmental Harms

Wildlife trafficking threatens the existence of many plant and animal
Online Library Emerging Issues In Green Criminology Exploring Power Justice And Harm Critical Criminological Perspectives

species and accelerates the destruction of wildlife, forests, and other natural resources. It contributes to environmental degradation, destroys unique natural habitats, and deprives many countries and their populations of scarce renewable resources. Nevertheless, preventing and supressing the illegal trade in wildlife, animal parts, and plants is presently not a priority in many countries and it remains overlooked and poorly researched. The chapters included in this volume address causes, characteristics, and actors of wildlife trafficking, analyse detection methods, and explore different international and national legal frameworks.

Routledge International Handbook of Green Criminology Ethical principles and concerns are at the heart of criminological research and can arise at the planning, implementation and reporting stages. It is vital that researchers are aware of the issues involved so that they can make informed decisions about the implications of certain choices. This cutting-edge book charts the changing topography of ethics, governance and accountability for social science research in criminology, contributes to the developing discourse on research ethics and demonstrates the importance as to why research ethics should be taken seriously. Bringing together a range of experts who consider both quantitative and qualitative methodologies. This book examines the key issues and challenges of ethical research. Topics covered include: the measures in place to ensure ethical research practice for social scientists; the relationship between state funding and research findings; the challenge of researching sensitive areas; the changing face of governance and accountability for academic criminology. Research Ethics in Criminology is a comprehensive and accessible text that is ideal for students studying criminological research methods. Supplementary material includes key points, chapter summaries, critical thinking questions, key definitions, case examples, and recommendations for further reading. This book will provide a thorough grounding in the ethical issues faced by researchers, as well as an understanding of the role and purpose of ethics committees.

Transnational Environmental Crime Over the past ten years, the study of environmental harm and ‘crimes against nature’ has become an increasingly popular area of research amongst criminologists. This book represents the first international, comprehensive and introductory text for green criminology, offering a concise exposition of theory and concepts and providing extensive geographical coverage, diversity and depth to the many issues pertaining to environmental harm and crime. Divided into three sections, the book draws on a range of international case studies and examples, and looks at the conceptual and methodological foundations of green criminology, before examining in detail areas of environmental crime and harm, and how they are addressed, including: climate change and social conflict; abuse and harm to animals; threats to biodiversity; pollution and toxic waste; environmental victims; environmental regulation, law enforcement and courts; environmental forensic studies; environmental crime prevention. Green Criminology is packed with pedagogical features, including dialogue boxes, case examples, discussion questions and lists of further reading and is perfect for students around the world engaged with green criminology and crime against the environment.

Emerging Issues in Green Criminology "This book provides an overview and assessment of green criminology. Based on a political-economic analysis, Green Criminology draws attention to the ways in which the political-economic organization of capitalism causes ecological destruction and disorganization. Focusing on real-world impact, chapters include political-economic examinations of ecological withdrawals, ecological additions, toxic towns, wildlife poaching and trafficking, environmental justice, environmental laws, and nongovernment environmental organizations. The book also explores how
ecological footprint, planetary boundary analysis, and other scientific research applies to green criminological analysis”--Provided by publisher.

Southern Green Criminology This book brings together the findings of a multi-disciplinary and international research project on environmental crime in Europe, funded by the European Union (EU). “European Union Action to Fight Environmental Crime" (EFFACE) was a 40-month research project that included eleven European research institutions and think tanks and was led by Ecologic Institute Berlin. EFFACE assessed the impacts of environmental crime as well as effective and feasible policy options for combating it from a multidisciplinary perspective, with a focus on the EU. As part of this project, numerous instances of environmental crime within and outside of the EU were studied and are now presented in this volume. This edited collection is highly innovative in showing not only the many facets of environmental crime, but also how it should be conceptualised and the consequences. An original and rigorous study, this book will be of particular interest to policy makers and scholars of green criminology and environmental studies.

Transnational Crime and Global Security [2 volumes] This ebook is a selective guide designed to help scholars and students of criminology find reliable sources of information by directing them to the best available scholarly materials in whatever form or format they appear from books, chapters, and journal articles to online archives, electronic data sets, and blogs. Written by a leading international authority on the subject, the ebook provides bibliographic information supported by direct recommendations about which sources to consult and editorial commentary to make it clear how the cited sources are interrelated related. A reader will discover, for instance, the most reliable introductions and overviews to the topic, and the most important publications on various areas of scholarly interest within this topic. In criminology, as in other disciplines, researchers at all levels are drowning in potentially useful scholarly information, and this guide has been created as a tool for cutting through that material to find the exact source you need. This ebook is a static version of an article from Oxford Bibliographies Online: Criminology, a dynamic, continuously updated, online resource designed to provide authoritative guidance through scholarship and other materials relevant to the study and practice of criminology. Oxford Bibliographies Online covers most subject disciplines within the social science and humanities, for more information visit www.aboutobo.com.

Wildlife Trafficking: the illicit trade in wildlife, animal parts, and derivatives This book explores the use of restorative justice approaches in the context of environmental crimes. It critically assesses regular criminal justice approaches with regard to green crimes and explores restorative justice conferencing as an alternative. Focussing on justice approaches in Australia and New Zealand, it argues that court processes following environmental offending provide minimal to no offender and victim voice, interaction, and input, rendering them invisible. It proposes a third measure of justice - that of meaningful involvement, beyond that of fair procedure and outcome. It suggests the use of restorative justice conferencing, a facilitated dialogue between stakeholders to crime or conflict, as a vehicle to operationalise and achieve justice as meaningful involvement. This book speaks to those interested in green criminology, victimology and environmental law.

Environmental Crime and Justice: Oxford Bibliographies Online Research Guide Policing Wildlife examines both the extent and enforcement of wildlife law, one of the fastest growing areas of crime globally. The book considers how enforcement regimes
need to adapt to contemporary wildlife crime threats, particularly those posed by terrorism and organised crime.

Quantitative Studies in Green and Conservation Criminology The enormous financial cost of criminal justice has motivated increased scrutiny and recognition of the need for constructive change, but what of the ethical costs of current practices and policies? Moreover, if we seriously value the principles of liberal democracy then there is no question that the ethics of criminal justice are everybody's business, concerns for the entire society. The Routledge Handbook of Criminal Justice Ethics brings together international scholars to explore the most significant ethical issues throughout their many areas of expertise, anchoring their discussions in the empirical realities of the issues faced rather than applying moral theory at a distance. Contributions from philosophers, legal scholars, criminologists and psychologists bring a fresh and interdisciplinary approach to the field. The Handbook is divided into three parts: Part I addresses the core issues concerning criminal sanction, the moral and political aspects of the justification of punishment, and the relationship between law and morality. Part II examines criminalization and criminal liability, and the assumptions and attitudes shaping those aspects of contemporary criminal justice. Part III evaluates current policies and practices of criminal procedure, exploring the roles of police, prosecutors, judges, and juries and suggesting directions for revising how criminal justice is achieved. Throughout, scholars seek pathways for change and suggest new solutions to address the central concerns of criminal justice ethics. This book is an ideal resource for upper-undergraduate and postgraduate students taking courses in criminal justice ethics, criminology, and criminal justice theory, and also for students of philosophy interested in punishment, law and society, and law and ethics.

Greening Criminology in the 21st Century Southern Green Criminology focuses on the threat the western world poses to the rest of the globe, and how Western imposed ideas of progress are damaging the planet, especially the southern hemisphere.

Environmental Crime and Social Conflict This book explores how young people perceive the severity of crime and delinquency. It particularly addresses whom or what they consider to be the victims of crime and delinquency, how they analyze and assess appropriate responses by the criminal justice system, as well as their place within it. The book proposes tools for developing a more elaborate and robust understanding of what constitutes crime, identifying those affected by it, and what is deemed adequate or appropriate punishment. In so doing, it offers thick description of young peoples' conceptions of and experiences with crime, delinquency, justice and law, and uses this description to interrogate the role of the state in influencing - indeed, shaping - these perceptions.

Environmental Crime and Restorative Justice With contributions from over 60 leading experts in the field, The Oxford Handbook of Criminology is the definitive guide to the discipline providing an authoritative and outstanding collection of chapters on the key topics studied on criminology courses. The Handbook has shaped the study of criminology for over two decades and, with this new edition, continues to be indispensable to students, academics, and professionals alike. Each chapter details relevant theory, recent research, policy developments, and current debates. Extensive references aid further research. Extensively revised, the sixth edition has been expanded to include all the major topics and significant new issues such as zemiology; green criminology; domestic violence; prostitution and sex work; penal populism; and the significance of globalization for criminology. The Oxford Handbook of Criminology is accompanied by a suite of online resources providing additional teaching and learning materials for both students and lecturers. This includes selected chapters from previous
Online Library Emerging Issues In Green Criminology Exploring Power Justice And Harm Critical Criminological Perspectives

ditions, essay questions for each chapter, web links to aid further research, and guidance on how to answer essay questions.

Environmental Crime in Latin America This book brings the visual dimension of environmental crimes and harms into the field of green criminology. It shows how photographic images can provide a means for eliciting narratives from people who live in polluted areas - describing in detail and from their point of view what they know, think and feel about the reality in which they find themselves living. Natali makes the argument for developing a visual approach for green criminology, with a single case-study as its central focus, revealing the importance of using photo elicitation to appreciate and enhance the reflexive and active role of social actors in the symbolic and social construction of their environmental experiences. Examining the multiple interactions between the images and the words used to describe the socio-environmental worlds in which we live, this book is a call to open the eyes of green criminology to wider and richer explorations of environmental harms and crimes. An innovative and engaging study, this text will be of particular interest to scholars of environmental crime and cultural, green and visual criminologies.

The Routledge Handbook of Criminal Justice Ethics The book presents discussions of the application of Stan Cohen's theories alongside empirical contributions in the fields of critical and green criminology. Taken together, the authors critically address harms and crimes against the environment, as well as against human and nonhuman victims.

Historical Pollution This book provides a comprehensive introduction to and overview of eco-global criminology. Eco-global criminology refers to a criminological approach that is informed by ecological considerations and by a critical analysis that is global in scale and perspective. Based upon eco-justice conceptions of harm, it focuses on transgressions against environments, non-human species and humans. At the centre of eco-global criminology is analysis of transnational environmental crime. This includes crimes related to pollution (of air, water and land) and crimes against wildlife (including illegal trade in ivory as well as live animals). It also includes those harms that pose threats to the environment more generally (such as global warming). In addressing these issues, the book deals with topics such as the conceptualization of environmental crime or harm, the researching of transnational environmental harm, climate change and social conflict, threats to biodiversity, toxic waste and the transference of harm, prosecution and sentencing of environmental crimes, and environmental victimization and transnational activism. This book argues that analysis of transnational environmental crime needs to incorporate different notions of harm, and that the overarching perspective of eco-global criminology provides the framework for this. Transnational Environmental Crime will be an essential resource for students, academics, policy-makers, environmental managers, police, magistrates and others with a general interest in environmental issues.

Uniting Green Criminology and Earth Jurisprudence Environmental crime is one of the most profitable and fastest growing areas of international criminal activity. The increasing cross-border scope of environmental crimes and harms is one of the reasons why governments and the enforcement community have trouble in finding the proper responses. Law enforcement cooperation between western industrialized states is often time consuming and problematic, and the problems increase exponentially when environmental criminals take advantage of situations where government and law enforcement are weak. This book provides an overview of the developments and problems in the field of transnational environmental crimes and harms, addressing these issues from perspectives such as enforcement, deterrence, compliance and emission trading.
schemes. Divided into four parts, the authors consider global issues in green criminology, responses to transnational environmental crimes and harms, alternative methods to combat environmental crime, and specific types of crimes and criminological research. Discussing these topics from the view of green criminology, sociology and governance, this book will be of great interest to all those concerned about the transnational dimensions of crime and the environment.

Green Criminology A comprehensive introduction to green criminology, this book is a discussion of the relationship between mainstream criminal justice and green crimes. Focused on environmental harm within the context of criminal justice this book takes a global perspective and introduces students to different theoretical perspectives in green criminology. Looks at the victims of environmental crime throughout Covers topics such as: wildlife crimes, animal abuse, the causes of environmental crime, regulation, exploitation, environmental activism, policing, prosecution and monitoring. Designed to help readers develop a thorough understanding of the principles of environmental justice and green criminology, as well as contemporary developments, this book will be excellent support to students of green criminology and environmental crime.

The Illegal Wildlife Trade The Routledge International Handbook of Green Criminology was the first comprehensive and international anthology dedicated to green criminology. It presented green criminology to an international audience, described the state of the field, offered a description of a range of environmental issues of regional and global importance, and argued for continued criminological attention to environmental crimes and harms, setting an agenda for further study. In the six years since its publication, the field has continued to grow and thrive. This revised and expanded second edition of the Handbook reflects new methodological orientations, new locations of study such as Asia, Canada and South America, and new responses to environmental harms. While a number of the original chapters have been revised, the second edition offers a range of fresh chapters covering new and emerging areas of study, such as: conservation criminology, eco-feminism, environmental victimology, fracking, migration and eco-rights, and e-waste. This handbook continues to define and capture the field of green criminology and is essential reading for students and researchers engaged in green crime and environmental harm.

Fighting Environmental Crime in Europe and Beyond This impressive collection of original essays explores the relationship between social conflict and the environment - a topic that has received little attention within criminology. The chapters provide a systematic and comprehensive introduction and overview of conflict situations stemming from human exploitation of environments, as well as the impact of social conflicts on the wellbeing and health of specific species and ecosystems. Largely informed by green criminology perspectives, the chapters in the book are intended to stimulate new understandings of the relationships between humans and nature through critical evaluation of environmental destruction and degradation associated with social conflicts occurring around the world. With a goal of creating a typology of environment-social conflict relationships useful for green criminological research, this study is essential reading for scholars and academics in criminology, as well as those interested in crime, law and justice.

The Oxford Handbook of Criminology The first comprehensive collection of its kind, this handbook addresses the problem of knowledge production in criminology, redressing the global imbalance with an original focus on the Global South. Issues of vital criminological research and policy significance abound in the Global South, with important implications for South/North
relations as well as global security and justice. In a world of high speed communication technologies and fluid national
borders, empire building has shifted from colonising territories to colonising knowledge. The authors of this volume question
whose voices, experiences, and theories are reflected in the discipline, and argue that diversity of discourse is more important
now than ever before. Approaching the subject from a range of historical, theoretical, and social perspectives, this collection
promotes the Global South not only as a space for the production of knowledge, but crucially, as a source of innovative
research and theory on crime and justice. Wide-ranging in scope and authoritative in theory, this study will appeal to scholars,
activists, policy-makers, and students from a wide range of social science disciplines from both the Global North and South,
including criminal justice, human rights, and penology.

Green Criminology This book is the first systematic investigation into the problem of timber trafficking in Vietnam, providing a
detailed understanding of the typology of, victimization from, and key factors driving this crime. The book first reveals a
multifaceted pattern of timber trafficking in Vietnam, comprising five different components: harvesting, transporting, trading,
supporting, and processing. It then assesses the crime’s victimization from timber trafficking. Thanks to the employment of a
broad conceptual framework of human security, Cao reveals that timber trafficking has substantial harmful impacts on all
seven elements of human security: economic, food, health, environmental, personal, community, and political; whilst being
closely interconnected, they vary between different groups of victims. Cao concludes by offering five solutions to better
control of timber trafficking in the context of Vietnam, which crucially involve refining the current policy framework of forest
governance and improving the efficiency of law enforcement. A wide-ranging and timely study, this book will hold particular
appeal for scholars of green criminology and environmental harm.

Green Criminology This volume examines legal matters regarding the prevention and fighting of historical pollution caused by
industrial emissions. "Historical pollution" refers to the long-term or delayed onset effects of environmental crimes such as
groundwater or soil pollution. Historical Pollution presents and compares national legal approaches, including the most
interesting and effective mechanisms for managing environmental problems in relation with historical pollution. It features
interdisciplinary and international comparisons of traditional and alternative justice mechanisms. This book will be of interest
to researchers in criminology and criminal justice and related areas, such as politics, law, and economics, those in the public
and private sectors dealing with environmental protection, including international institutions, corporations, specialized
national agencies, those involved in the criminal justice system, and policymakers.

Green Cultural Criminology This book is the first green criminology text to focus specifically on Latin America. Green
criminology has always adopted a broad horizon and explicitly emphasised that environmental crimes and harms affect
countries and cultures around the world. The chapters collected here illuminate and describe the “theft of nature” and the
“poisoning of the land” in Latin America through and from processes of agro-industry expansion, biopiracy, legal and illegal
trafficking of free-born non-human animals, and mining. An interdisciplinary study, this collection draws on research from a
wide range of international experts on not only green criminology, but also social justice, political ecology and sociology. An
engaging and thought-provoking work, this book will be an essential text for anyone interested in current issues in
environmental crime.
A Visual Approach for Green Criminology Issues in Green Criminology: confronting harms against environments, humanity and other animals aims to provide, if not a manifesto, then at least a significant resource for thinking about green criminology, a rapidly developing field. It offers a set of specially written introductions and a variety of current and new directions, wide-ranging in scope and international in terms of coverage and contributors. It provides focused discussions of current and cutting edge issues that will influence the emergence of a coherent perspective on green issues. The contributors are drawn from the leading thinkers in the field. The twelve chapters of the book explore the myriad ways in which governments, transnational corporations, military apparatuses and ordinary people going about their everyday lives routinely harm environments, other animals and humanity. The book will be essential reading not only for students taking courses in colleges and universities but also for activists in the environmental and animal rights movements. Its concern is with an ever-expanding agenda – the whys, the hows and the whens of the generation and control of the many aspects of harm to environments, ecological systems and all species of animals, including humans. These harms include, but are not limited to, exploitation, modes of discrimination and disempowerment, degradation, abuse, exclusion, pain, injury, loss and suffering. Straddling and intersecting these many forms of harm are key concepts for a green criminology such as gender inequalities, racism, dominionism and speciesism, classism, the north/south divide, the accountability of science, and the ethics of global capitalist expansion. Green criminology has the potential to provide not only a different way of examining and making sense of various forms of crime and control responses (some well known, others less so) but can also make explicable much wider connections that are not generally well understood. As all societies face up to the need to confront harms against environments, other animals and humanity, criminology will have a major role to play. This book will be an essential part of this process.

Exploring Green Crime In the 21st century, environmental harm is an ever-present reality of our globalised world. Over the last 20 years, criminologists, working alongside a range of other disciplines from the social and physical sciences, have made great strides in their understanding of how different institutions in society, and criminal justice systems in particular - respond - or fail to respond - to the harm imposed on ecosystems and their human and non-human components. Such research has crystallised into the rapidly evolving field of green criminology. This pioneering volume, with contributions from leading experts along with younger scholars, represents the state of the art in criminologists’ pursuit of understanding in the environmental sphere while at the same time challenging academics, lawmakers and policy developers to explore new directions in the study of environmental harm.

Environmental Crime and Social Conflict A comprehensive introduction to all the key topics, criminological theories, and important themes that students will cover when studying criminology and criminal justice.

Timber Trafficking in Vietnam In the past three decades, a stream of criminological inquiry has emerged which explores, measures, and theorizes crimes and harms to the environment at the micro-, mezzo-, and macro-levels. This “green criminology”, as it has come to be known, has widened the criminological gaze to consider crimes and harms committed against air, land (from forests to wetlands), nonhuman animals, and water in local, regional, national, and international areas or arenas. Accordingly, green criminology has endeavored to understand the causes and consequences of air and water pollution, biodiversity loss, climate change, corporate environmental crime (e.g., illegal waste disposal), food production and
distribution, resource extraction and exploitation, and wildlife trade and trafficking, while also exploring potential responses to these issues. This book seeks to introduce the green criminological perspective to a broader social science audience. Recognizing that green criminology is not the first social science to explore the phenomena and harms at the intersections of humanity and ecology, this book offers an introduction to some of the unique insights developed over nearly 30 years of green criminological thought and scholarship to students, professors, researchers, and practitioners working in the fields of anthropology, economics, environmental humanities, environmental sociology, geography, history, and political ecology. This book contains contributions from researchers in green criminology from around the world, including early- and mid-career scholars, as well as more established voices in the field—all of whom are dedicated to exposing, understanding, and ultimately hoping to thwart further environmental degradation and despoliation.

Alternative Criminologies Environmental harms exert a significant toll and pose substantial economic costs on societies around the world. Although such harms have been studied from both legal and social science perspectives, these disciplinary-specific approaches are not, on their own, fully able to address the complexity of these environmental challenges. Many legal approaches, for example, are limited by their inattention to the motivations behind environmental offences, whereas many social science approaches are hindered by an insufficient grounding in current legislative frameworks. This edited collection constitutes a pioneering attempt to overcome these limitations by uniting legal and social science perspectives. Together, the book’s contributors forge an innovative socio-legal approach to more effectively respond to, and to prevent, environmental harms around the world. Integrating theoretical and empirical work, the book presents carefully selected illustrations of how legal and social science scholarship can be brought together to improve policies. The various chapters examine how a socio-legal approach can ultimately lead to a more comprehensive understanding of environmental harms, as well as to innovative and effective responses to such environmental offences.

Green Harms and Crimes This edited collection brings together internationally renowned scholars to explore green criminology through the interdisciplinary lenses of power, harm and justice. The chapters provide innovative case study analyses from around the world that seek to advance theoretical, policy and practice discourses about environmental harm.

Issues in Green Criminology Alternative Criminologies celebrates a kaleidoscopic process of permanent critique and a diversity of social and scientific knowledges. It examines complex and global crime issues in light of the many alternative scientific, artistic, empathetic, campaigning and otherwise imaginative criminologies that attempt to understand and/or fundamentally change why crime and justice take the forms they do. From cutting edge topics such as crimes against humanity, the criminology of mobility, terrorism, cybercrime, corporate crime and green criminology; to gendered perspectives on violence against women, sexualities and feminist and queer criminologies; to key issues in penology such as mass incarceration, the death penalty, desistance from crime, risk and the political economy of punishment; Alternative Criminologies demonstrates the breadth, the variety and the vibrancy of contemporary perspectives on crime, criminalization and punishment. Bringing together 34 leading experts from around the world, this international collection unites fresh and insightful theoretical positions with innovative empirical research and marks an important juncture for criminologies and their imagined futures. Alternative Criminologies is essential reading for students of crime and criminal justice.
Green Criminology This impressive collection of original essays explores the relationship between social conflict and the environment - a topic that has received little attention within criminology. The chapters provide a systematic and comprehensive introduction and overview of conflict situations stemming from human exploitation of environments, as well as the impact of social conflicts on the wellbeing and health of specific species and ecosystems. Largely informed by green criminology perspectives, the chapters in the book are intended to stimulate new understandings of the relationships between humans and nature through critical evaluation of environmental destruction and degradation associated with social conflicts occurring around the world. With a goal of creating a typology of environment-social conflict relationships useful for green criminological research, this study is essential reading for scholars and academics in criminology, as well as those interested in crime, law and justice.

The Palgrave Handbook of Criminology and the Global South During the early development and throughout the short history of green/conservation criminology, limited attention has been directed toward quantitative analyses of relevant environmental crime, law and justice concerns. While recognizing the importance of establishing a theory and terminology in the early stages of development, this book redresses this imbalance. The work features contributions that undertake empirical quantitative studies of green/conservation crime and justice issues by both conservation and green criminologists. The collection highlights the shared concerns of these groups within important forms of ecological crime and victimization, and illustrates the ways in which these approaches can be undertaken quantitatively. It includes quantitative conservation/green criminological studies that represent the work of both well-established scholars in these fields, along with studies by scholars whose works are less well-known and who are also contributing to shaping this area of research. The book presents a valuable contribution to the areas of Green and Conservation Criminology. It will appeal to academics and students working in these areas.

Environmental Crime in Transnational Context In this book the author examines the illegal wildlife trade from multiple perspectives: the historical context, the impact on the environment, the scope of the problem internationally, the sociocultural demand for illegal products, the legal efforts to combat it, and several case studies from inside the trade. The illegal wildlife trade has become a global criminal enterprise, following in the footsteps of drugs and weapons. Beyond the environmental impact, financial profits from the illegal wildlife trade often fund organized crime groups and violent gangs that threaten public safety and security in myriad ways. This innovative volume covers several key questions surrounding the wildlife trade: why is there a demand for illegal wildlife products, which actors are involved in the trade, how is the business organized, and what are the harmful consequences. The author performed ethnographic fieldwork in three key markets: Russia, Morocco, and China, and has constructed a detailed picture of how the wildlife trade operates in these areas. Conversations with informants directly involved in the illegal business ensure unique insights into this lively black market. In the course of his journey the author follows the route of the illegal wildlife trade from poor poaching areas to rich business districts where corrupt officials, legally registered companies, wildlife farms and sophisticated criminal organizations all have a share. A fascinating look inside the world of poachers, smugglers and traders.

An Introduction to Criminology The application of criminological perspectives to discussion of the environment is a rapidly developing field at the cutting edge of criminology. This innovative but accessible introduction to the key debates in green criminology brings the reader up to date with significant areas of current research, offering a stimulating source of ideas and insights for students and researchers alike.
criminology both familiarises newcomers to the field with the core theories and methodological precepts and challenges them to take a critical approach. In addition to analysing an extensive range of contemporary issues - environmental harm, food and water security, fracking, climate change and genetically modified crops - the text steps back to examine overarching themes, including the power relationships between states, corporations and the human and non-human components of our environment. In this way, Exploring Green Crime prepares readers to approach environmental criminology with a questioning and analytical mind-set. With useful end of chapter summaries, review questions and further reading, the text is ideal for students of criminology, criminal justice, law, sociology and environmental studies.

Geometries of Crime Over the last two decades, "green criminology" has emerged as a unique area of study, bringing together criminologists and sociologists from a wide range of research backgrounds and varying theoretical orientations. It spans the micro to the macro—from individual-level environmental crimes and victimization to business/corporate violations and state transgressions. There have been few attempts, however, to explicitly or implicitly integrate cultural criminology into green criminology (or vice versa). This book moves towards articulating a green cultural criminological perspective. Brisman and South examine existing overlapping research and offer a platform to support future excursions by green criminologists into cultural criminology's concern with media images and representations, consumerism and consumption, and resistance. At the same time, they offer an invitation to cultural criminologists to adopt a green view of the consumption landscape and the growth (and depictions) of environmental harms. Green Cultural Criminology is aimed at students, academics, criminologists, and sociologists with an interest in green criminology and cultural criminology: two of the most exciting new areas in criminology today.

Policing Wildlife As planet Earth continues to absorb unprecedented levels of anthropogenically induced environmental and climatic change, two similar academic schools of thought have emerged in recent years, both making sustained efforts to explain how and why this state of affairs has evolved. These two disciplines are known as green criminology and earth jurisprudence. Whilst these areas of study can be seen as sub-disciplines of their parent subjects, law and criminology, this book proposes that much can be achieved by authors uniting and collaborating on their academic work. By doing this, it is argued that green criminology stands to benefit from a discipline that places mother nature at the heart of lawmaking and therefore providing a solution to the environmental harms identified by green criminologists. Furthermore, earth jurisprudence will profit from utilising the breadth of academic work produced within the green criminology academic arena. Therefore, this book seeks to unite green criminology and earth jurisprudence in an effort to find solutions to the extraordinary environmental problems that the world now faces.

Research Ethics in Criminology Green Criminology embraces a wide and rapidly growing network of researchers and scholars around the world who are actively engaged in the study of environmental crime and ecological justice. Transgressions against humans, eco-systems, and animals constitute the main focus of Green Criminology and this new four-volume collection from Routledge provides an authoritative, one-stop reference work to make sense of the wide range of approaches, theories, and concepts that have informed its development and growth. Themes covered in the collection include: the conceptual foundations of Green Criminology; victimization and offending; criminal-justice responses to environmental crime; and emerging environmental issues, such as climate change, that demand urgent criminological attention. Topics range from
transnational environmental crimes, such as the illegal dumping of waste and illegal trade in wildlife, through to prosecution and sentencing in relation to environmental crimes. Each volume provides a provocative and stimulating showcase of criminological research, scholarship, and commentary dealing with the nature and dynamics of environmental crime. The volumes are structured to provide users with a strong sense of the theories, methodological approaches, conceptual innovations, and empirical research of Green Criminology. Together, they constitute an essential work of reference for anyone interested in social and environmental transformations and justice from a criminological perspective.

Green Criminology Environmental crimes are primarily driven by financial motives. The combined financial value of illicit trade in protected wildlife, illegal logging and waste trafficking is estimated to come directly after counterfeiting, the narcotic drugs trade and illegal gambling. Logically, the proceeds of these crimes must also be laundered. Goods, however, are not the only money maker for environmental criminals. Corporations may also try to ‘save’ costs by not complying with environmental regulations and thus commit crimes of omission rather than commission. From an enforcement and compliance perspective focusing on the proceeds of crime may therefore be an effective strategy. This book brings together different perspectives on the financial aspects of environmental crime and harm from a green criminological viewpoint. It addresses the role of economic systems, the value of environmental performance for corporations, money laundering in the context of environmental crime, financial investigation and questions of regulation and penalties. Discussing these topics from the view of green criminology, sociology and governance, this book will be of great interest to all those concerned about the financial dimensions of crime and the environment.

Green Crimes and Dirty Money This two-volume work offers a comprehensive examination of the distressing topics of transnational crime and the implications for global security. • Represents global collaboration among contributors including scholars from respected universities in Europe, North America, and Australia; professionals at public policy research institutes; and researchers at several United Nations entities • Provides perspectives from contributors of geographic diversity and varied backgrounds that combine to form a global panorama of crime and security topics • Provides readers a single work to learn about both specific transnational crimes (Volume 1) and efforts to prevent and combat those crimes (Volume 2) • Prefaces each chapter with an introduction that contextualizes content for closer reading
